

TIREVIGIL™ TPMS ANSWERS THE CSA 2010 CHALLENGE

Are you ready for **CSA 2010**? Every fleet in the U.S. is preparing for the new fleet safety rating system that gathers data from roadside inspections, traffic violations, and crashes and analyses it in a new way. Any and all problems that occur even if not ticketed or cited will be included in your fleet's new safety rating, which determines whether your company can continue to operate on the nation's highways.

Fleets are scrutinizing their Operations and Maintenance practices and discovering new technologies that help them get more visibility and control over their drivers and vehicles. Since tires are the second leading cause of roadside inspection citations after brakes, fleets are finding that TireVigil™ TPMS is just the technology they need to maintain their tires better, prevent enroute tire problems, and reduce the number of tick marks in the "Bad" column of their CSA 2010 rating.

What TireVigil™ Can Do For You:

- Monitors your fleet's vehicles' tires 24/7, moving or parked
- Delivers Alerts to fleet Operations and Maintenance personnel and your fleet's tire service provider whenever a tire or wheel end problem arises
- Not in your office much? Delivers Alerts to your Smartphone, iPhone, Android, Blackberry, etc.
- Delivers Alerts for underinflation, overinflation, differences in dual tire pressure, and overheating.
- Provides the last known location of the vehicle with every Alert
- Enables you to find the closest tire service provider to the problem vehicle
- Gives you visibility of not only tire problems but also of other wheel end problems such as dragging brakes and frozen wheel bearings
- Helps prevent wheel end fires
- Reminds you that lug nuts should be retorqued after a tire change
- Helps prevent wheel-offs
- Records date and time that drivers acknowledged in-cab Alerts
- Lets you customize thresholds for pressure and temperature Alerts and Retorque Reminders
- Easily enables changes to target air pressure or Alert thresholds to tighten up maintenance on one vehicle or on your entire fleet
- Calculates cold inflation pressure on pressure Alerts to advise service technicians the correct adjustments that should be made even in hot tires
- Delivers reports for management and service personnel when you schedule them
- Generates tire work orders automatically for daily tire service at all fleet locations
- Provides verification of the quality of in-house and out-sourced tire service
- Generates reports on how well tires are maintained including fleet-wide tire pressure surveys

TireVigil™ TPMS puts control of your tires and your tire program back in your hands by giving you the visibility and knowledge you need to proactively manage your drivers and maintain your tires to prevent out-of service incidents, eliminate citations, and tire-related enroute breakdowns.

TireStamp Inc. Profile:

TireStamp's mission is to provide tire life-cycle management information under the TireVigil™ brand to commercial carriers and passenger fleet operators that allow fleets to maximize tire performance and reduce operating costs. Our customers - fleet operators, tire manufacturers, tire dealers and drivers use this data to better manage tire assets, drive vehicle efficiencies, and operate in a safer environment. TireStamp is the leading tire monitoring and tire asset management systems supplier to commercial fleets, tire and commercial vehicle OEMs. As an asset intelligence company, TireStamp provides expertise on tires and their effects on operational costs, tire life-cycle management, asset management and other critical performance data that enables fleets to reduce tire and fuel costs in addition to improving productivity and safety.
